Errata

This section contains a brief listing of known mistakes or misleading typographical errors that have appeared in the Linotype-Hell Technical Information series.

1993 Notebook
Technology Update: Diamond Screening – The chart on page 53 lists an addressability setting (847 dpi) that does not exist for Herkules.

1992 Notebook
Calibrating on Imagesetter Paper – On the last page of this article, in the section called *How to choose an n value,* the n value is a misprint. Where it reads 1.7, it should read 1.45.

Blends and shadestepping – On the third page of this article, the example at the top of the page shows a calculation:

$$\textbf{Grays} = (2540/150)2 = 286.7$$

This should read:

$$\textbf{Grays} = (2540/150)^2 = 286.7$$

Similarly, directly below, the sentence:

$$\textbf{Grays} = (1270/150)2 = 71.68$$

Should read:

$$\textbf{Grays} = (1270/150)^2 = 71.68$$

Scanned File Size – On the last page of this article, in the *Formulas* section, a similar error occurred. It should read:

(Tonal resolution/8) x (Spatial resolution)^2 x (Dimensions) = File Size
(bytes/sample)   (samples/in^2)   (in^2)   (bytes)

Below that, the formula should read:

$$((8/8 \text{ x } (300)^2 \text{ x } 80) / 1{,}048{,}576 = 6.9 \text{ MB}$$

Important information

This is the final update for the 1993 Linotype-Hell technical information notebook. The 1994 notebook will be available shortly. If you have an active Linotype-Hell service contract or are a Linotype-Hell User Group member as of January 1, 1994, you will receive a single complimentary copy of the 1994 notebook. In addition, if you are not currently a Linotype-Hell service contract or a Linotype-Hell User Group member and become one during 1994, you will receive a complimentary 1994 notebook. If you are currently a subscriber, this will be your last mailing unless you order the 1994 notebook. Please call 1-800-842-9721 to order the 1994 notebook.
