MACR #8273 includes this information, “At 1127 hours, aircraft #44-40098 was seen to peel off from the formation with its #3 engine and right wing in flames. When last seen, it appeared under control and two chutes were seen.” [Near Hannover]

The navigator, Arnold H. Grueber, provided additional information, “I had been flying with two or three crews – lack of manpower, you know. Was flying with the Minnesota boys every day, and when my crew was called up, I flew with them.

“This day I was flying with my crew and we were tail end Charlies. The low slot was clobbered heavily by anti aircraft fire. It not only riddled the aircraft with holes, it also set us afire and knocked out #4 engine. I bailed out at 24,000 feet and the darned plane went into a flat, but wide, spin and came at me four times! It landed in the same dry field as I did, cartwheeled and all hell broke loose.

“Injured, I was picked up by the hostile civilians and saved from hanging when the Luftwaffe Polizei arrived. Just like the old movies! I was taken to a temporary hospital and put into a room where a B-17 pilot was bedded down. He was severely burned – name of Maier, from Minnesota. I tried to nurse him the best I could while we were being transported to Dulag, near Frankfurt. But I don’t believe my litter patient survived.

“I was immediately identified as a traitor by my captors because both my grandfather and great grandfather went to the USA in the 1870’s and prior had lived in the Hanover area.”

Apparently all of the crew parachuted safely except Homer Braswell. However, at approximately 1300 hours, pilot Lt. Dittmer and right waist gunner Raymond Gasperetti, were lined up and shot – apparently by the civilians before the military arrived. This, according to statements made by Arnold Grueber. They were murdered!

S/Sgt. Eugene B. Fogelstrom, substitute top turret gunner from the 66th Squadron, remembers, “This was to be a routine flight. I thought that it would be a milk run as it was over water most of the way and we had been there before. Dummer Lake was our IP and always had accurate flak.

“From my position in the top turret, I could see smoke and some fire too, coming out of an engine when the alarm was sounded. I was the second one out from the front area. I counted to 10, pulled the ripcord, and felt a slight shock when the chute opened.

“I looked around but couldn’t see the plane or any other chutes. It was so quiet, no breeze, and so beautiful. I seemed so stationary that I began worrying that I wasn’t going down – perhaps I was too light and was just suspended there.

“Then I noticed that I was losing altitude and quit sweating, so reached into my pocket for a cigarette. But my lighter was in a lower pocket, so I started to unstrap my leg strap to get at it, when it dawned on me I could fall right out of the chute, so gave it up. I have always wondered what the Germans would have thought of me coming down smoking a cigarette. I really wasn’t all that cool, of course, did strange things, sometimes.”

Homer Braswell had been wounded so badly that when it came time to bail out, he simply could not make it.

There were several crewmen seriously wounded during the month of September but there are few records with which to do little more than to identify the names, dates and Squadrons. These men are shown this month in date & Squadron order.
11 September 1944
Misburg, Germany

Two 67th Squadron crewmen were injured during this mission.

Lt. Porter said that, “I was on Frank Hurst’s crew on the trip to Misburg (Hannover) on the 11th. We had just finished dropping our bombs when a piece of flak came through the plexiglass of the nose turret, shattering it and a piece of the glass entered my eye. I couldn’t see then but didn’t think it too serious. But we heard that the Group ahead of us in the formation [the 492nd] was being raked over by fighters and I had to let Carl Appelin take my place in the turret to man the guns so we wouldn’t meet the same fate. We later learned that this Group was nearly wiped out. I recovered later, with no permanent damage done.”

13 September 1944
Schwabish-Hall Airfield, Germany

Two crewmen were injured in separate incidents during this mission.

West Frankfort, Illinois
Very little information is available on Albert Chisman, except that he was injured while in a 66th Bomb Group B-24 piloted by Maurice Stevens. He was injured on his fifth mission and did not fly his next one until 26 October. He then went on to complete his tour of duty with 36 missions on 24 March 1945.

67th SQUADRON:

67th Sq., #42-95193 I-Bar, Holcomb            THREE KISSES FOR LUCK            Injured crewmember

67th Squadron Crew:

HOLCOMB, JAMES C.          Pilot           1st Lt.
HERMAN, BERNARD. L.         Co-pilot        2nd Lt.

MANSIR, EVERETT W.          LW Gunner       S/Sgt.
RHODES, JOHN L.            Tail Turret     S/Sgt.

Note: Lt. Herman was KIA on 18 October 1944.

T/Sgt. Rodriguez stated, “My diary shows that it was a Jet Aircraft airfield at Hall, Germany that we hit, and Major William Cameron, 67th’s Squadron’s C.O., was Command Pilot that day. Lt. Herring had been our first pilot, but he completed his tour and our co-pilot, Lt. James Holcomb was promoted to take his place that day. Our aircraft was #42-95193 I-Bar, THREE KISSES FOR LUCK, one which we had flown since our 19th mission – this was our 29th, all in the 67th.

“I had the distinct privilege of serving as radio operator on Capt. Charles (Chuck) S. Herring’s crew from its inception in December 1943 in March Field, California. On the day of the mission in question, then 1st Lt. Herring was not flying as he had finished his tour of 30 missions whereas the rest of us on his crew had only 29 missions. He had gone one jump on us due to the fact that he had flown his first mission as an observer on someone else’s crew – as a combat orientation mission. Our co-pilot, 1st Lt. James Holcomb, having checked out as a first pilot, was in command.

“We were carrying 500 lb. general-purpose bombs and flak over the target was reported to be heavy at the briefing that morning. We were hit by very heavy flak before we reached the target and lost our #2 engine – all fuel tanks hit and damage to our hydraulic system – I, myself, was wounded by flak through my left thigh and it was touch and go for awhile as to whether or not we would have to bail out. Since we were losing fuel and altitude, the order was given to lighten the ship and everything that could be moved and wasn’t bolted down, was thrown out.

“We were alone and vulnerable and a decision was made to try to make Switzerland, however, shortly after two P-38s responding to our distress calls joined us and escorted us to an airfield used by artillery spotters very close to the then front lines. We made an emergency landing there and I was taken on a stretcher, by ambulance, to a field hospital very close by after preliminary treatment at a first-aid station. My crewmembers came by that afternoon to visit me after I had been operated on and left me all of their “C” rations, which I eventually traded off. They told me they had counted over 200 holes on the ship, which was left there at the artillery observer’s field.
They then took off for Paris, which had been liberated only a few short weeks before. They promised to fly back and fire flares to advise me what my wife, Marie, who was pregnant with our first child, had delivered – red-red if a girl – blue-blue, if a boy.

“They spent close to a week in Paris before they were flown back to England. I spent about a week at the field hospital in a tent that I shared with eight men from a bomb disposal squad who had been injured while disposing of German butterfly bombs. We had constant visits from French farmers who brought us fruit and spirits. There seemed to be daily artillery duels between both sides as we could hear the rumbling of cannon fire in the distance.

“From this field hospital, I was sent by ambulance to a hospital in Paris where the signs were still printed in German and I wore German pajamas. I stayed at this hospital for about ten days, was then sent to a hospital near Cherbourg, and then by boat hospital (this vessel the “Nile” belonged to the king of Egypt and had been donated by him for this use) to a tremendous-sized hospital in Southampton, England from where I was discharged on the 14th of October. I was supposed to return to Stone, England, but I wasn’t going to take any chances on being reassigned to some other outfit, so I took off on my own back to Shipdham to the 44th Bomb Group where the first sergeant at the 67th [Robert Ryan] fixed it all up.”

Rodriguez returned to combat status and flew his next mission on 2 November, and completed his tour of 34 missions on 5 November 1944.

Frank Gerbe provided this account: “On our way to target area we flew over the Rhine River and got hit with a heavy concentration of flak. The first hit knocked out our #2 engine and ripped open our fuel cells. The next burst of flak hit our oxygen supply tanks and Rodriguez was wounded in the leg.

“Our vacuum gauges on #1 and #2 engines were hit. Gas was pouring into the bomb bays from the holes in the tanks. We literally fell from the sky, with a loss of 7,000 feet altitude. Holcomb was our pilot this day and we had a rookie co-pilot. Our air speed dropped to about 120 mph. Our #3 engine was hit as well as the fuel cells, which were leaking, #3 engine was sputtering and missing. Holcomb used the radio to inform the rest of the flight of our predicament.

“In a few minutes, two of the most beautiful P-38s came alongside and gave us close support and guidance to a friendly field. Bandits were reported in the area and you cannot imagine our feelings with those two P-38s on our wing tips. Little friends were what we called those two P-38s and they guided us toward an airfield in Laon, France.

“We started our approach for a landing and #3 engine cuts out. Then set the selector valves from #4 to #3 engine and started fuel pumps; #3 engine started right up again. That was not the end of our problems. As we went above the runway, we found that the Jerry’s had bombed it two nights ago. It was too late now to change our minds about landing.

“As we hit the runway, the nose wheel gear broke and the main landing gear on the left and tire were ripped up. Immediately, we cut all engines off and old I-193 rolled to a stop. Luckily, she didn’t catch fire. During this hectic ride, we had been throwing all extra weight, such as ammunition, flak suits, guns and etc. overboard, just to make the ship lighter.

“As we hit the runway, the nose wheel gear broke and the main landing gear on the left and tire were ripped up. Immediately, we cut all engines off and old I-193 rolled to a stop. Luckily, she didn’t catch fire. During this hectic ride, we had been throwing all extra weight, such as ammunition, flak suits, guns and etc. overboard, just to make the ship lighter.

“An ambulance took Rodriguez to a hospital. Later on we hitchhiked to the hospital to see Rodriguez. He was coming along okay. Then decided to head for Paris. Stayed overnight at Chauny, France and spent a while in Paris. We got good and drunk while in Paris and went sightseeing when we were not drinking.
“Flew I-193 on this mission and she has had it. We ain’t got her no more. She was shot up too badly and we had to abandon her. Our hearts were broken to lose our favorite, “THREE KISSES FOR LUCK,” but in our memories, she’ll always be part of us.” [Editor’s note: She was repaired and completed the war with 83 missions.]

18 September 1944
Low Level Supply Mission, Best, Holland

68th SQUADRON:

68th Sq., #42-50596, Konstand

68th Squadron Crew:

KONSTAND, GUS Pilot Capt.
ADAMS, LEWIS C. Command Pilot Lt. Col.
PARKER, GEORGE J. Navigator 2nd Lt.
BAXTER, ROBERT C. Navigator-GEE 1st Lt.
LOFLIN, WILLIAM E. Bombardier 2nd Lt. Huntington, West Virginia

Note: Six members of this crew were KIA on 28 December 1944: Konstand, Oliver, Parker, Loflin, Fields, and Stephanovic. Three others (Lybarger, Davis, and Garrett) survived and were taken prisoner.

Lt. Loflin had been a member of Capt. Konstand’s crew when they were transferred from the 492nd Bomb Group in mid-August 1944. He had completed many missions with that Group and was on his fourth mission with the 44th when wounded. According to the Interrogation Report for the Capt. Konstand’s Crew, 2nd Lt. Loflin was struck in the left buttocks. He was taken to the 52nd Field Medical Hospital for treatment. He returned to active duty on 23 December 1944 and was KIA on 28 December 1944.

William Lybarger’s wife Phyllis, provides some additional information on this mission: “You may be interested to know the ‘true’ story about what happened that day. Bill had always said he was ‘shot down’ twice and Davis put all the confusing pieces together for me. As you know, they were flying low to drop supplies and Loflin, the bombardier, was wounded in the buttocks and the plane landed near Brussels. Well, Loflin’s wound was not serious. What caused the plane to land was that the two left engines had been shot out and since they were flying so low, they couldn’t get any altitude to fly home, therefore, they had to land! They were lucky to be near an airport.

“They returned the next day in another plane. Three additional personnel, Lt. Col. L. C. Adams, 1st Lt. Robert C. Baxter, and H. Conroy were aboard that day as they thought it would be an easy flight to fly. Guess they were sorry they went! Anyway, it appears they must not have
wanted it to appear on their records that they were ‘shot down,’ so it was not recorded that way. Since this happened the day after Brussels was liberated, that’s why those Belgium farmers were so glad to see Bill. He saw Hitler’s picture in ‘The Mannekin Pis’ fountain in Brussels.”

Both of these men were on the aircraft piloted by Lt. Richard H. Habedank and were wounded at about the same time. Sgt. Elwood A. Matter, assigned as top turret gunner normally on this crew, relates his story, “On this mission, my third, I was in the waist dropping supplies out of the ball turret opening. The turrets had been removed for this mission.

“As we approached the drop zone at about 400 feet, we encountered heavy small ammo fire. One of these shells exploded in the turret opening and I was struck in the left arm, face and scalp with the shell fragments. It put me in the hospital near Shipdham [231st Sta Hosp. at Wymondham] for about a month before I returned to duty [9 November 1944]. Our co-pilot, Lt. DuPont, was also wounded on this same mission by an exploding shell. His wounds were not as severe as mine and he returned to duty before I did.

“While I was in the hospital, my crew kept flying missions so I got behind. When they finished their tour of 30 missions, I was assigned to another crew (Captain E.J. Burns) as a waist gunner. I flew on the March 24th 1945 re-supply low-level mission to ground troops near Wesel, Germany under almost the exact same conditions and position and wondered if I’d be wounded again. But this time our nose turret gunner, Sgt. Truslow, was wounded, but happily, not very seriously and he recovered in a short time and soon returned to duty. This is the crew I flew home with in June of 1945.” Matter completed his tour of duty on 20 April 1945. He received his Purple Heart from General Johnson.

28 September 1944
Kassel, Germany, Mission 229: Motor Works

One 68th Squadron aircraft was hit by flak and made an emergency landing in Belgium

68th SQUADRON:
68th Sq., #42-52618 Bar-B, Dayball | CHIEF WAPELLO | Emergency landing

DAYBALL, JULIAN H. | Pilot | 2nd Lt.
DAVIS, RICHARD H. | Navigator | 2nd Lt.
REINECKE, CALVIN C. | Bombardier | 2nd Lt.
FINK, IVAN W. | Eng./Top Turret | Sgt.
SICARD, EDWARD P. | Radio Oper. | Sgt.
COUVILLION, WILBERT L. | RW Gunner | Sgt.
SMITH, MALCOLM R. | LW Gunner | Sgt.
SHEA, JOHN J. | Tail Turret | Sgt.

Note: Couvillion and Shea bailed out okay and joined the rest of the crew at the airfield. The Dayball crew was shot down on 18 October 1944. Dayball, Phillips, Davis, Fink, Sicard, Couvillion, Smith, and Shea were KIA.

Bob McGee, who had been on the Dayball crew, provided the following information on this mission: “September 28, 1944 was a mission (which I wasn’t on) to Kassel Tank Factory, plane number B-618, and the crew had bad luck. The bombing was on PFF. The plane had gotten a lot of anti-aircraft flak and they headed for the Brussels, Belgium airport. The pilot, Lt. Dayball, said anyone could bail out if they wanted to as he didn't know if the landing would be a good one. One engine was out and two were losing oil.

I know Bill Couvillion was one who bailed out and John Shea was another. Bill told me he landed in a tree and when he started down, a man was there talking in French. Bill was from Louisiana and could also speak French. Bill met John at a crossroads. The plane landed okay. Dayball was a very good pilot. Bill said the stores had many flavors of ice cream and there were lots of expensive cameras for sale. They left the plane there and all of the crew came back to our base by ATC (air transport command).”

Less than one month later, the Dayball crew was shot down on the mission to Leverkusen, Germany.

30 September 1944
Hamm, Germany

The 44th Bomb Group attacked the secondary target, the Hamm Marshalling Yards, with unobserved results due to the cloud cover. Bombing was accomplished by PFF method. This Group led the 14th Combat Bomb Wing and the 2nd Division. One 66th Squadron aircraft and crew was Missing In Action.

The MACR includes these facts, “At 1324 hours, just after bombs away and at the target, this aircraft (#531 R+) was flying in #3 position in the low squadron and apparently was hit by flak. It was last observed at 1325 hours leaving the formation, dropping below, and apparently under control.”

lst Lt. Arthur S. Ledford sent additional information about this raid, “We saw no flak until after bombs away and then we were hit at least four times. #1 engine went out immediately and #3 was hit but still producing some power. However, it was burning and eventually burned through the side of the fuselage. We also took a hit around the waist and one near the tail, which got our tail gunner.

“After being hit, we lost power and speed, rapidly dropped behind the formation. We were able to hold to approximately 300 feet per minute descent and when we reached 17,000 feet, I told the waist gunners to go to the tail and check on Starr to see if he was alive. If so, they should tie him to a static line and throw him out, as it was evident that we must all bail out soon. They called back to report that the top of his head had been blown away and he couldn’t possibly be alive. So the decision was made to leave him with the plane.

“Approximately 35 minutes off the target, the fire burned into the plane and everybody left except the bombardier, Lt. Pascal, navigator Tomblin, and myself. Those two could not get out due to a malfunction of one of the nose wheel doors. When the plane eventually blew up, they were standing on the doors and were blown out into the air, where they pulled their cords and landed OK.

“After getting rid of all my gear (flak suit, helmet, oxygen mask, electric suit, headphones, etc), I jumped from the flight deck, through the fire there and through the bomb bay. I left at approximately 14,000 feet and pulled the cord at about 1,000 feet. A large piece of the fuselage floated down within 250 feet of where I landed. About another 200 feet away, one of the waist gunner’s jackets came down. Two of the engines fell in the yard of a house about 1/4 mile from where I hit the ground.

“Tomblin, Pascall and I were together in prison camp for the duration. The other crew members who had bailed out earlier, were captured in different places and were taken another direction.”

Radio operator Edward Sharp has written, but not published, a book about World War II, but sent only the following, “We left on pay-day, a beautiful day. Our target was Hamm – and your information is correct, we started sagging behind after feathering the outboard engine. (rather
hastily, I thought) I had a splendid view from the upper turret. From there I could see that we were taking a lot of flak.

“Soon, our inboard engine was streaming smoke and occasionally belched fire. It was the first indication that we were going to bail out. I dropped to the flight deck where Bill Wrights, the engineer, was stretched out with his harness buckled and chute on. He was staring at the bomb bay. I followed his gaze while snapping up my harness and chute, noticing as he did, that the bays were filled with smoke and spraying gasoline. The bombs were all gone, thank goodness.

“I was attempting to tie my G.I. shoes to my harness when the explosion occurred. Bill ripped up the deck floor door and worked the handle to manually open the bay doors; then he leapt through the fire – and I was on his shoulders.

“When I had the opportunity, I checked the time to find it to be 1337 hours. I tried to stay sane by figuring my chances of reaching the Belgian border a few miles to the west.

“S/Sgt. Starr, our tail gunner, was killed and still on board. Sgts. Wiener and Bertolio later told me that Starr had a terrible head wound that was fatal. They could not get him out of the turret.

“We surviving enlisted men were later grouped together in Stalag Luft IV in Poland. After evacuating that camp to the Russians, we met our co-pilot Armstrong in the officer’s camp, Stalag Luft I, Barth. The unofficial name we gave our ship was ‘MY SAD ASS’ as it was our pilot’s favorite expression.”

The navigator, James Tomblin, wrote: “We received three direct hits in the tail, bomb bay, and the nose, thirty seconds before the target. We fell out of formation. The #1 engine was completely disabled, the #2 engine losing power, the #3 was on fire, and #4 was okay. The hydraulics were knocked out also and the bomb bay doors would not close. Had I occupied my usual position between the ammunition cases in the nose, as I had on all previous missions, a piece of flak would have undoubtedly struck me. As it was, I had decided to stand up on this mission, for some reason, and I got the compass heading before we went over the target instead of afterwards. I was standing when flak came through the nose and went between my legs and into an oxygen bottle under the navigator’s table. I started to call the pilot about it, but decided there was too much excitement anyhow.

“The bombardier called up all the crewmembers. All of them answered but the tail gunner. He called the tail gunner three times, and then told the waist gunners to go back there and see about him. At first they balked because they were so afraid, they were scared stiff; but Dick then ordered both Weiner and Bertolio to the tail. Then they reported back the situation: ‘Hank’s done for,’ came the voice of Bertolio over the intercom.

“The pilot called me and asked for an ETA to the Rhine River. Once across the Rhine, we would be over Allied-held territory. I computed an ETA of 2:00 pm, using the air speed and wind we had over the target. Since our air speed had dropped, I thought I should add five minutes more to the time. Instead I subtracted the five minutes and gave Ledford an ETA of 1:55. I’ll never know why I did this silly thing. Ledford said later that he would have given the order to bail out sooner, had he known.

“The pilot then gave the order to prepare to bail out, and I took off my flak suit. The upper turret, Sharp, asked if he ought to get out of his turret, and Ledford said ‘yes,’ he had forgotten about him. So Dick Pascal said he thought he had better get out of his nose turret. It was now about fifteen minutes to 2:00 o’clock.
“Pascal unplugged his intercom, preparing to leave the turret. While I was helping him (it’s very cramped in the nose and two doors must be opened and closed to get anyone out of the turret), I accidentally unplugged my own intercom. It was just then that the pilot ordered everyone to bail out. Of course, neither Pascal nor I heard the order.

“Pascal got out of the turret, and he had closed the turret doors and was just closing the back hatch doors when all four engines quit and the intercom went dead. The hydraulics were already gone; we lost them over the target. It became absolutely quiet.

“Pascal didn’t know the engines had quit. I tapped him on the shoulder and pointed to our parachutes, the snap-on chest packs laying under the navigator’s table. He crouched down and I looked under the table back toward the bomb bay, and saw fire back there.

“We decided we ought to leave. He still didn’t know the engines were out. He handed me up my parachute, and got his. I put mine on and looked up above the navigator’s table to the pilot’s rudder pedals and saw the cockpit, which was empty. A big tongue of flame went across it while I was looking. I made up my mind to leave the airplane then, and crouched down just behind the bombardier. Just as Dick reached for the emergency release handles, which were supposed to jettison the nose wheel doors, the flames came up into the nose and both of us were enveloped in flame. Then I saw Dick pull the release handles and saw one door disappear. The second door did not release. Dick crawled out, laid on the door and began pounding it with his hand. So I sat back and waited (eyes closed) until I thought Dick had time to get out. I was in the fire all this time, and I could feel myself burning.

“Then, just as I started to move toward the door opening, I thought something had come between me and the fire because I was no longer on fire. I thought that it was the navigator’s table, and that I was going to have to move that to get to the possible escape opening under the nose wheel.

“Two seconds later, I found myself out in the air. Just as I left the ship I felt my parachute leave me. I could not find it at first. Then I heard something flapping above my head and I looked up, and there it was, still attached. The static lines had been tacked on with thread to the parachute harness, and the thread had burned through, leaving the chest pack about eight feet above my head. So I pulled it down to me, and pulled the ripcord and the parachute opened. Looking across the way, I saw Dick in the air at the same level I was, and a part of a wing came fluttering by. Then I looked down below me and saw a large tree. Then I was on the ground, landing in a small ditch next to a barbed wire fence. I remembered to clear my ears on the way down. I also remember holding the ripcord in my hand, wondering if I dropped it that it might injure somebody. Strange thought! A ripcord is a 1/4” diameter steel rod curved to form a handle. It is pretty heavy.

“The plane obviously had exploded but I heard nothing and felt nothing. Both Pascal and myself were badly burned, and Dick’s left hand was broken by some flying object. Strangely enough, my left hand was very badly burned but the rayon glove I had on my right hand wasn’t even singed.

“I got out of my parachute harness and got out of the ditch. Over the fence I saw a civilian farmer. He started talking to me in German; I could not understand it. So then he said, ‘Parlez vous francais?’ Thinking I might be talking to a member of the underground, I got very excited. Remembering I had just completed two years of high school French, I said: ‘Mais oui, j’etude pour deux ans dans l’ecole.’ He responded immediately, correcting my French, just like my French teacher. ‘Non, non, non! Deuxans, deuxans!’ (duzan, as though one word). Then he said
‘Avez-vous le bon-bon?’ Hoping he might help me evade capture, I gave him my escape kit containing maps, money, concentrated food, some of which was chocolate. I think he may have heard of escape kits before. Then he walked away. This was probably the most bizarre thing that ever happened to me during the war.

“A group of soldiers pulled up on a dirt road about 100 feet away. The leader of the group had a sub-machine gun. He gave me an order three times, without my understanding him, then pointed the gun directly at me. That is scary, looking down that gun barrel. A soldier indicated that he wanted my parachute. Another soldier helped me get my parachute disentangled from the branches and I was taken to a haystack about two blocks away. The road I walked on was lined with women and children, staring at us. The children didn’t seem to be afraid, and I knew I looked pretty terrible with my face and hair so burned.

“When I got to the haystack I saw Pascal sitting there. The Germans had already captured him. He stood up and shook hands with me. We sat around the haystack, with a lot of civilians around us, who thought it was an interesting sight. Ledford came up about fifteen minutes later. Just before Ledford came, a staff sergeant from a B-17 was brought to the same haystack. He had a flak wound in his left arm. We also saw another parachute at about 10,000 feet in the air.

“One of the German soldiers put salve on Dick and myself; face, ears, my left hand, and ankles. We were the enemy, had just bombed one of Germany’s large cities, and this soldier was showing compassion!”

Lt. Harris’ aircraft was hit by flak in the target, seriously damaging both wings, forcing the pilots to be very cautious while limping back to base. Sgt. Van Eynde, right waist gunner, also was hit and injured seriously in his upper right arm during this same flak barrage. He was admitted to the hospital to recover. He had completed 10 missions prior to this one, but his injuries would not permit him to fly any additional missions.
7 October 1944
Kassel, Germany

The Group attacked the Tank Factory at Kassels with 37 aircraft. Flak at target was intense and accurate, with the 506th Squadron losing two planes and another was forced to land at Brussels, Belgium with the pilot seriously wounded.

The MACR states that this aircraft, #789, was last seen in vicinity of Kassels at 1224 hours. #1 and #2 engines had been knocked out by flak and it fell out of formation, under control. It was last heard from at approximately 1239 hours calling on VHF for fighter support. It was believed to be trying for or heading toward friendly territory.

Lt. Donald B. Iden, co-pilot, sent the following information: “We had just closed the bomb bay doors after releasing bombs over Kassel when our plane, which was named LAKANOOKIE, took two bursts of flak. One hit the left wing and the other went into the tail section. The hit in the wing took out the #1 and #2 engines, so that made it impossible to keep a heading without complete cross-control of ailerons and rudders. Needless to say, loss of altitude was very rapid.

“We rode it down to 1,500 feet, at which time we bailed out and soon were captured. After Salfen and I bailed out, the aircraft entered a flat spin, crashed and burned.

“No, Leo Suszek was not an evadee – he was captured by the Germans as were the rest of us. But, somehow, he was badly injured on bailout. When we last saw him on the ground, he was unable to converse and appeared to be in extreme pain. I thought he had internal injuries of some kind. We gave him an injection of morphine before he was taken away.
“We were told that Robert Doherty’s parachute failed to open. Apparently Francis Buckley went
down with the aircraft. I can only assume that he probably was unable to bail out, but for reasons
unknown. Possibly the flak hit in the rear could have injured him or damaged his chute.

“Spent the rest of the duration at Barth, Germany – Stalag Luft I. After the war, Suszek visited
me two or three times before he headed for the V.A. Hospital in Tucson, Arizona. I have not
heard from him since.”

The second 506th aircraft that failed to return was piloted by Homer E. Still and Francis C.
Welborn.

The MACR relates that aircraft #167 was last observed in target area at Kassel. Bombs were
away at 1224 hours under heavy anti aircraft fire. This plane then dropped slightly behind the
formation.

Sgt. John Dahlin made the statements that, “Our plane was hit by flak and set on fire. Seven of
us bailed out. The plane broke into pieces soon afterwards. I met the other six men who had
bailed out safely, but none of us ever again saw Sgt. Hibbs. Later, a German Major told me that
three bodies were found in the crashed plane. He had a correct list of names of the missing crew
members.”

Radio Operator John Lord sent a tape of his experiences, “September 1st was our first mission as
a crew. The pilot, Still, and co-pilot Welborn had flown one other combat mission prior to this.
But on our first mission, the tail hit a white fence at end of runway – I could see pieces of the
fence fly! We [later] dropped our 1,000 pound bombs through the bomb bay doors. Not a very good way to start.

“On the 7 October mission to Kassels, being the newest crew, we got one of the oldest planes to fly. It was patched up, my radio table was broken off, no place to write. [Editor’s note: Aircraft received from the 492nd Bomb Group when that Group was de-activated.]

“When we opened the bomb bay doors, I could see the flash of flak guns shooting at us. We had trouble with one engine losing power, finally had to feather it. Not then being able to keep up with the formation, we began to fall behind. Our pilot, Homer Still, asked John Wilson, navigator, for a heading to fly back over France.

“Another engine on the right side was lost, making two of them feathered on that side of the wing, and we were in deep trouble. About that time I heard a loud POP and then saw our co-pilot, Welborn, open the top hatch and climb out! When I turned around and looked into the bomb bay, I saw the reason for that exit. It was full of flames.

“How was I to get out? Normally I could have climbed up on the radio table and pulled myself up though that same top hatch, but the table was broken. I had my chest pack chute on but in a dilemma as what to do when the plane made my decision for me – it turned upside down. I then fell out of that open top hatch – well, almost out. My heated suit and intercom plugs were holding me tight. I quickly broke or tore them loose and fell free.

“I found myself in a head first position and slowly spinning so that I had little sense of falling. I guess that my altitude at that time to be about 17,000 feet. Slowly I saw the ground getting closer, pulled my ring and thankfully saw my chute blossom out. Looking down, I could see a round, burning area of incendiaries, so I pulled on some shroud lines and missed the fire, and landed in an open field. Then a large piece of the aircraft – the waist area – came down close to me. I suspect that the plane had exploded for that piece to hit like that.

“I had burns on my left hand and around my eyes. A young German lad of about 8 to 10 years old, helped me with my chute. Then German soldiers came running up, holding pistols on me. I had landed close to a Signal Corps practicing in the woods, unfortunately, with no possibility of evasion.

“They took me to a dispensary where I was bandaged on my hand and face. While I was there several teen-aged boys, who had been manning a flak gun nearby, came in to see me. They thought they had shot us down. Both Dahlin and Wyant had been shot at as they were coming down. I also learned that Welborn hit his head on something when he left through the top hatch, severely damaging his eye. I later got gangrene in my burned left hand, was treated by some British doctors who had been captured earlier, but suffered no permanent damage – thanks to them.”

Seriously wounded on this same mission to Kassel was 2nd Lt. John W. Jones, Jr.

**Note:** Sgt. Garza was KIA on 30 October 1944.

Aircraft #894 received a direct hit in the bomb bay and #1 engine, which had to be feathered. The aircraft headed for friendly territory and landed at Brussels. The pilot, Lt. Jones, had been hit in both legs, had his left leg amputated when treated at the 8th British Army Hospital.

2nd Lt. Clement R.C. Holcombe, co-pilot on this aircraft, was instrumental in making the safe emergency landing without a pilot. He states that, “The mission was to Kassel and the target was the Tiger Tank Factory. We were hit on the bomb run before dropping our bomb load. Lt. Jones was injured and I was hit in the back of my left shoulder, rendering my left arm useless.

“Sgt. Kirkland, engineer, also was hit, but fortunately his flak suit protected him from serious injury. The right wing fuel tanks were punctured and both #1 & #2 engines were damaged and lost normal power. The radio was damaged and I learned later that we were transmitting all right but could not receive. Adding to our problems was our compass which was malfunctioning and would not indicate correctly. #4 engine caught fire briefly, but it was blown out because we lost a few thousand feet in a hurry.

“When I finally got the plane straightened out, the formation was gone. I got Sgt. Kirkland to help Lt. Jones from his position and had him get into Jones’ seat to handle the throttles and help me with the rudder pedals. With my injured left arm I could not manipulate the throttles or other controls which were on my left side. The plane was ‘crabbing’ due to the uneven power output between the left and right sides, making straight flight most difficult.

“We salvoed our bombs to help hold altitude and tried to contact our ‘little friends’, but were not able to contact any of the fighters. Since Jones was hurt badly, and we were losing fuel steadily, I was afraid we might have to ditch if we continued towards England, and probably couldn’t get Jones out from a ditching situation.

“Lt. Westenhiser, navigator, found that Strip B-58, near Brussels, had very recently been taken from the Germans, so we decided to try to land there. With the compass screwed up, we just plain lucked out, finding it on the first pass.
“I followed a B-17 in on the final, (approach leg) but he did not make it, and crashed just short of the runway. There were bomb craters everywhere, but enough had been filled in to make a landing possible.

“With Sgt. Kirkland handling the throttles, I got the plane down OK. Jones and I were taken to the hospital. A day or two later, I was able to walk around with my arm in a sling. Our crew hitched a ride back to England in a C-54, but we hit bad weather and had to land near Dover. Next morning the C54 dropped us off right in front of the control tower!

“This was our seventh mission, but I spent some time in the hospital before going on to fly 23 more missions before returning to the States. Other than Lt. Jones, Raul Garza, who was our ball turret gunner, was the only other crewman who didn’t complete his tour. He went down over Germany while flying a make up mission.” [30 October 1944]

Lt. Holcombe was recommended for the Silver Star medal for his remarkably safe emergency landing under the most trying of conditions. But this modest pilot never mentioned this commendation in his letter.

Note: Sgt. Robert Eugene Kirkland’s son, Chuck Kirkland, wrote to say that his father had told him that the aircraft was named “Down the Hatch” and had a picture of a bomb dropping into a toilet on it. Chuck Kirkland reported that his father had died in January of 1994. Further research shows that the aircraft known as “Down de Hatch” (#42-95016) was not flown this day but did complete the war with a total of 93 missions.

18 October 1944
Leverkusen, Germany

This Group sent 31 aircraft to attack the Chemical Works located at Leverkusen. Bombing was accomplished with G-H equipment; results unobserved due to clouds. Three aircraft did not return, due primarily to the severe weather conditions that existed over the continent. Squadrons incurring losses were the 67th and 68th.

**Note:** Lt. Col. Turnbull was originally from 492 Bomb Group, then later 44th Headquarters.

The MACR was not available but there is a statement from Sgt. George Encimer, right waist gunner on this crew. “Approximately seven miles from the assigned target, the radio operator, Jerome Stern called on the interphone to say that there was fire in the bomb bay. I, then, went there – forward and looked into the bay. Evidently the bombs had been salvoed by the bombardier, as the bay was empty.

“On the way back to the base there was a large cloud bank or front, building up to 28,000 feet that we could not get over. We were at 24,000 feet and proceeded to go through this bank of clouds. While still in the bank, we must have hit a prop wash (or collision). The engines were throttled back. About this time, it felt like a huge force was lifting the right wing. The aircraft went into a sharp bank to the left. It was at this time, I think, that Colonel Turnbull, the Command Pilot, said, ‘Center the needle! Center the needle!’

“I knelt on my knees and buckled the hook of my chest-type parachute to the harness. The aircraft then flipped over on its back. I fell and broke my arm. When I looked up, I saw the rear escape hatch, and the next thing I remember is being outside the ship. I pulled my ripcord and soon afterwards heard an explosion.

“Within moments I saw land beneath me. Cecil L. Scott, left waist gunner, landed approximately 30 feet away from me, but his chute hung up in a tree.

“The Canadians gave Scott a quart of blood and set my broken arm. We had landed approximately seven miles from Ghent, Belgium. Shortly after that, they put me on a hospital train back to the 231st hospital near Shipdham.

“The last aircraft we saw before going into that cloud bank was U-Bar, below us at five o’clock. I think that the pilot had trouble with the controls or control cables.”

**Note:** The aircraft Encimer refers to was from the 67th Squadron: #42-50539, SULTRY SUE.

George Encimer also stated that all other crew members were killed when this plane crashed 1 kilometer from Petegem, Deinze, Belgium. All watches stopped at 1307 hours. The dead were buried at the U. S. Army Cemetery, Flanders Field, Waregem, Belgium. It should be noted, too, that Colonel Turnbull was not killed immediately, but died two days later.

Lt. Col. John I. Turnbull, the Group Operations Officer, was Air Commander on the mission and aboard Lt. Bakalo’s ship. Col. Turnbull was an All American lacrosse player in the Baltimore, Maryland area and was a member of the 1936 U.S. Olympic Team in the Olympic Games at Berlin. In his honor, an annual Turnbull Trophy is awarded, equivalent in lacrosse to the Heisman in football. He served with the 492nd Bomb Group immediately before his transfer to the 44th Bomb Group.

See Lt. Dayball’s story below for related information.

68th SQUADRON:
On the route out of the continent near the coast, a cloud layer building up to 28,000 feet caused the group to break the integrity of the formation. As described previously, the two aircraft collided. On 24 October, 1944, six days after the above two losses, official word was received as to the cause for the loss of two of the three aircraft MIA on the 18th.

“The flight surgeon’s report stated that the aircraft piloted by Lts. Bakalo and Dayball, collided in mid-air during an electrical storm over Belgium. Both aircraft crashed, with one exploding; all crew members were killed in action except Lt. Bakalo’s two waist gunners, who bailed out safely. Twelve bodies were found in the two crashed Liberators.

The second 68th aircraft that failed to return on the 18th was piloted by 1st Lt. Edward C. Lehnhausen, brother to the commanding officer of the 68th Squadron.

**Note: Jefferson Barracks National Cemetery is in St. Louis, Missouri.**
With no MACR available and little or no information in either the reporting of the 68th Squadron or the 44th Headquarters, it has taken many years to discover any data about the loss of this aircraft and crew.

This mission planning as briefed changed as soon as the Lead plane, E-806, piloted by Parks failed to take off. Colonel Turnbull transferred to D-944, piloted by Captain Bakalo and they led the formation. 1st Lt. Edward Lehnhausen, in O-596, had been shown to be in the last section, and on the right, behind Lt. Kelly. Also, there were several other aircraft that aborted, so the briefed positions were considerably changed.

Robert Lehnhausen, brother of Edward, told me that, “The 44th Bomb Group filled in a formation with another Group. It was three ‘boxes’ and the fourth squadron filled in. Edward was in the high, right section and Lt. Dayball was in the low left. Edward was on Lt. Kelly’s wing and had a poor navigator who was on his 10th mission.

“When the formation approached that high weather front, they separated to avoid collisions. When Bakalo’s aircraft turned over and went down, it is believed it crashed into Dayball’s. But it is believed that Lehnhausen’s ship became separated from all the others and was flying alone near Walcheren Island, just off the Netherlands coastline when they reached the North Sea.

The crewmembers were temporarily buried at various, rather scattered cemeteries. Bob Dimpfl checked, but learned nothing. Edward was buried in Luxemburg, while another was buried at Aachen – so the crew was scattered but no one knows why.”

The casualty report provides the following details: “[At 1330 h.] Flak batteries shot off the tail of the B-24 [B-24J 42-50596, FLAK MAGNET] which crashed near the casemates at Buttinge, 3 kilometers west of Middelburg on Walcheren Island, Holland. On return, the formation broke its integrity near Brussels where a cloud layer, building up to 28,000 ft. was encountered. Byron Davis’ body was found in the water near Buttinge. The island of Walcheren was inundated at that time, and only the higher lying parts (mostly centers) of the villages were still dry. The Liberator must have crashed on inundated territory, which may explain the loss of bodies.”

A witness named Mr. H. W. Bouwman (mayor of Grypskerke) reported: “The plane was heading towards Grypskerke (in a northern direction) then it circled back (south) seemingly looking for a place to land. It was spiraling down, gunning its engines trying to control itself when it suddenly lost control...spinning into the ground. The plane crashed at approximately 1,000 yards south southwest of the town of Buttinge in about five to six feet of water.

“The island where the plane crashed was flooded with water usually having about five feet of water, and at high tide, it would rise to ten feet. Therefore, most of the wreckage and the crewmembers, those who were pinned down, were submerged. During the period in which the
water remained from the time of crash to about November or December of 1945, we recovered two American aircorp men who were floating around, near the location of the wreckage (about 600 feet away). One was Byron C. Davis, ASN 34248774, who was later buried in Grypskerke cemetery and the other, Ernest A. Fuxa, ASN 18134853, who was buried in Middleburg cemetery. Both were recovered one or two months after the crash. Davis was later disinterred on 13 September 1945 and Ernest Fuxa about the same time. I believe that they were both reinterred in the Margraten cemetery.

“After the flood was drained from the island, I had a chance to look the wreckage over. I saw the bones of some of the crewmen under the broken parts of the wing and fuselage (which was pretty well covered over with barnacles) and estimated that there were about five or six bodies located in the wreckage. These facts are, to the best of my knowledge, all of the information I can recall about the airplane crash that took place at the above-mentioned time and place.”

A Dutch historian who has done considerable research on 8th Air Force losses provided the following information regarding Edward Lehnhausen and crew: A/C 42-50596 WQ Flak Magnet passed over Walcheren Island at about 1330 hours on 18 October 1944. It received a direct hit of flak, lost the complete tail section, and crashed near Buttinge, Netherlands (on that same island). The entire crew was killed. They came down near Middelburg on Zeeland of Welcherin Zuid. The bodies were buried locally, near where they came down. Shortly after the war, teams of investigators came in, exhumed the bodies and moved them to the continent. But these teams did not work together; they took the bodies to various other temporary burial areas on the continent. Later, when our men (Air Force) went to investigate our lost men, they found the crew in various, widely separated cemeteries. This caused considerable confusion as our investigators could not understand why the men were buried so widely separated. Eventually this puzzle was cleared, but not for some time – years later.

Hans Hauterman and John Hey from Holland, who have been investigating this crash, do not believe that the guns on Walcheren Island were responsible for the shooting down of B-24J 42-50596. They also sent an extract of a diary kept by a young Dutchman who wrote the following: “On 18 October, a four-engined bomber came down. There were thunderstorms in that afternoon and I think it was hit by lightning. It may also be that it had already been hit and damaged over Germany; the guns on Walcheren did not fire then. It was a ‘Liberator’ and came down from a very high altitude, each time overturning what made a terrific noise. It seemed that it would crash near to me but drifted away and fell near Buttinge.”

Hauterman and John Hey also report that Walcheren has the shape of a saucer; with high dunes at the sea sides. The Germans had built extraordinary bunkers and installed heavy guns that protected the access to the mouth of the Scheldt River, which runs from Antwerp to the North Sea. Analyzing the burial details in the Casualty Report, they concluded that Dolan, Davis, and Fuxa were recovered and buried in Grijskerke and Middelburg in October, December, and April. It has been recorded that Davis’ body was floating in the water and it is likely to accept that this was also valid for Dolan and Fuxa. Five crewmembers were recovered by a team of the Quartermaster-General that apparently had been attached to a grave Concentration Unit operating on the U.S. Military Cemetery at Luxembourg-Hamm. This team also recovered exhumed American bodies on other locations in the coastal area of western Holland. Most of the U.S. War Dead in Holland were concentrated into the military cemeteries at Margraten (Holland) and Neuville (Belgium).
A 66th Squadron aircraft experienced considerable difficulty on this mission and crash-landed in Belgium.

66th SQUADRON:
66th Sq., #42-51234 L+, Norris
Aircraft destroyed
66th Squadron Crew: All survived
NORRIS, CHARLES P. Pilot 1st Lt.
ROUZE, EUGENE R. Co-pilot 2nd Lt.
JOHNSON, DONALD Navigator 2nd Lt.
WIKMAN, CHARLES P. Bombardier 2nd Lt.
GARISTINA, UMBERT Radio Oper. S/Sgt.
TRIPP, HAROLD A. Eng./Top Turret S/Sgt.
CRESENTI, DIEGO F. RW Gunner S/Sgt.
RITTER, STEPHEN P. LW Gunner S/Sgt.
GRIMES, EDWIN R. Tail Turret S/Sgt.

This aircraft experience mechanical difficulty – no manifold pressure on #3 engine. It dropped to 30 inches and remained that way. #4 engine had fluctuating power. They returned with the formation, coming back over Belgium. When they made a check of the fuel level, they found only about 50 gallons remaining in each tank. After calling the Group’s formation leader, they did a 180-degree turn, let down from 21,000 feet through dark clouds – and iced up. They utilized instruments to finally break out of clouds at 2,000 feet and over Brussels, Belgium. Heading northeast, they missed the field, did another 180-degree turn to get back.

Then, engines started to spit and sputter from lack of fuel, so they headed for an open field; bombs were salvoed, which blew out all windows in the aircraft, damaged the elevators so they failed to operate. #3 engine began burning and #2 smoked. The pilots used throttles to maneuver the nose up and down – they had rudders and ailerons. They went into a grassy meadow about 30 miles northeast of Brussels. (HentjeWesterloo) The nose wheel collapsed, the main gear held up but the ship split apart. The dashboard was shoved back into the pilots’ laps, but only minor bruises and cuts from flying plexiglass resulted. The aircraft was completely wiped out.

30 October 1944
Hamburg, Germany

Due to weather conditions at the IP and interference by preceding Wings, our formation integrity was broken, forcing 19 aircraft to bomb the Hamburg Oil Refinery by PFF and eight others to attack Uterson, Germany. No enemy aircraft were encountered, flak at the target was heavy but inaccurate. One 506th Squadron aircraft did not return, with flak being suspected as the cause.

KIA, buried Ardennes (D-37-14)  

MACR #10139 states, in part, “Immediately after bombing, at 1318 hours, in vicinity of Hamburg, this aircraft went into a very steep bank. Heavy flak was encountered at this time. Aircraft came out of the 90-degree bank and was last observed flying apparently under control on 180-degree heading. Poor visibility, due to high clouds, made further sightings impossible. No chutes were seen.” (Wrong aircraft?)

Lester Griffin, engineer, said that three men survived: Fuller, Capps, and himself. “We were a radar crew and flew only in bad weather. We were on our 23rd mission. The plane exploded, knocking or blowing me out, and I came down by parachute after regaining consciousness. I am writing this letter from the V.A. Hospital in Gainsville.”

Further information was not possible as Sgt. Griffin died in 1983.

Sgt. Clint Fuller sent other brief statements, “Bentcliff, Gempel, Fiskum, Barefoot, Celentano, Maschmeyer, Downey and a man of Mexican descent (Garza), went down with the plane. Ralph W. Capps and I bailed out over Hamburg, but I don’t know how Lester Griffin managed to get out.

“We flew into a heavy front while leading the high, right squadron. Soup was so thick that we had to fly on instruments. Someone crossed over in front of us, with the prop wash flipping us over, and the plane spun into the ground from approximately 28,000 feet.

“On the contrary, our plane did not explode – it hit the deck. Neither was it a radar ship. The radio operator, Maschmeyer, froze, apparently from shock, and would not bail out. I had to climb over him in order to get to the catwalk in the bomb bay. On this mission, I was riding the top turret and that is why I had to fight my way past the radio operator. Both Barefoot and Garza were new to our crew. Barefoot was riding the nose turret in order to complete the final mission of his tour. He was killed.
“We did drop our bombs, but only to get rid of them. We saw no fighters or flak! In my opinion, there was no explosion as the German interrogator discussed our tail markings, base, Group, Squadron, town, Base Commander, etc.”

“Griffin, Capps and I were sent to Dulag Luft, Frankfurt, Stalag Luft IV; and moved to Stalag Luft I. Capps left Stalag Luft IV 30-31 January 1945 with 4-5,000 POWs who walked (snow waist deep) until the first week of May 1945. I saw him at Camp Lucky Strike after we were liberated. Griffin and I were sent from Stalag IV to Stalag I by railroad freight cars. We had it made!”

10 November 1944
Hanau, Germany

The Lanzendieback airfield, Hanau, which was near Frankfurt, was the target this date. There was no enemy resistance in the target area, but moderate and fairly accurate flak was encountered in Koblenz area. Two men were seriously wounded by this flak.

67th SQUADRON:

67th Sq., #42-50795 N-Bar, Spencer

Injured crewmember

67th Squadron Crew:

SPENCER, EDGAR J. Pilot 1st Lt.
COLELLA, FRANK J. Co-pilot 1st Lt.
BEAVERS, JOHN R. Navigator 2nd Lt.
GREEN, WILLIAM T. Bombardier 1st Lt.
FISHBONE, HENRY Radio Oper. T/Sgt.
MOSKOVITIS, PETER Eng./Top Turret T/Sgt.
STEWART, THOMAS R. RW Gunner S/Sgt.
SCHOFIELD, GEORGE E. LW Gunner S/Sgt. Rockaway, New Jersey
ASN 32057010 Evacuated to U.S.
PICARDO, EDDIE Tail Turret S/Sgt.

The target was in Hanau, Germany, near Frankfurt; probably an industrial plant. Lt. Spencer flew in the number 4 position (the center of the formation and logical aiming point for enemy ack-ack gunners). The flak was intense and accurate that day, resulting in 20 holes in the plane (N-bar).

During the bombing run, George Schofield was hit in the lower jaw and began bleeding profusely. It was the nose turret gunner, Tom Stewart, who went from the front of the plane, all the way to the back to administer first aid to Schofield. Lt. Spencer received permission to leave the squadron and got fighter escort on the way back to England. By flying in a gradual descent, he was able to increase his speed enough to keep up with the fighters and return to base approximately one hour ahead of his squadron. Flares were fired in the landing pattern to signal injured aboard. Ambulances and medical personnel met the plane at the hard stand.

The entire crew visited Schofield in the hospital the next day. (Lt. Spencer later learned that Schofield required multiple operations over the next several years to reconstruct his face.) The crew was given the next ten days off before the next combat mission, as was the custom when a crew member was badly injured. Schofield was replaced on the crew by Abercrombie, an armament gunner.
